Diagnostics

A Diagnostic Trouble Code (DTC) arises when a vehicle's computer detects a sensor failure or a parameter outside a specific range. In the case of a detected failure, most vehicles will illuminate the check engine light alerting you of a failure:

The Flashcal allows you view these codes, and gives you the option to clear them. The two Diagnostic menu options are as follows:

- **Read DTCs** - will be display the code along with a full text description.
- **Clear DTCs** - will allow you to clear the code, which will then turn off your check engine light.

If a DTC Persists...

This could indicate a vehicle malfunction. We recommend seeking a qualified professional in resolving the issue. Return the vehicle back to stock prior to service.

Identify Vehicle

The following information is provided by this feature:

- Vehicle Engine Control Unit (ECU) - is a device used to ensure optimum running.
- Diagnostic Comm - is how your vehicle communicates with individual systems & sensors.
- Vehicle Identification Number (VIN) - is a unique serial number use to identify your vehicle.
- Engine Control Module (ECM PN) part number - identifies the specific ECM installed.
